"Pivotal role of water in the mechanism of P450BM-3.";
Bjochemistry 40:13456-13465(2001).
-!- FUNCTION: FUNCTIONS AS A FATTY ACID MONOOXYGENASE. CATALYSES
HYDROXYLAATION OF MEDIUM AND LONG-CHAIN FATTY ACIDS AT OMEGA-1,
OMEGA-2 AND OMEGA-3 POSITIONS, WITH OPTIMUM CHAIN LENGTHS OF 14-16
CARBONS (LAURIC, MYRISTIC, AND PALMITIC ACIDS). THE REDUCTASE
DOMAIN IS REQUIRED FOR ELECTRON TRANSFER FROM NADP TO CYTOCHROME
                                                                                          oxidized flavoprotein + H(2)0.
COFACTOR: FAD AND FNN.
SIMILARITY: IN THE N-TERMINAL SECTION; BELONGS TO THE CYTOCHROME P450 FAMILY.
                                                                                                                                                                                                                                                                                                                                                  PRINTS; PR00371; FPNCR.

MEDLINE-87075664; PubMed-3098240;
WOGGI F., Lumpher L.;
"Complete structure of the hydrophilic domain in the porcine NADPH-cytochrome P-450 reductase.";
Blochem. J. 236:81-878(1986).

-1 FUNCTION: THIS ENZYME IS REQUIRED FOR ELECTRON TRANSFER FROM NADP TO CYTOCHROME P-450 IN MICROSOMES. IT CAN ALSO PROVIDE ELECTRON TRANSFER TO HEME OXYGENASE AND CYTOCHROME B5.
                                                                ---ITCFISTPQSEFTLPKDPETPLIMVGPGTGVAPFRGFVQARKQLKEQGQSLGEAHLY
                                                                                                                          505 RALVPMFVR--KSQFRLPFKSTTPVIMVGPGTGIAPFMGFIQERAWLREQGKEVGETLLY
                                                                                                                                                                                                                                                                                                                                                 -!- SUBCELLULM AND TAND.
-!- SUBCELLULM AND ALCAPION: ENDOPLASMIC RETICULUM. ANCHORED TO THE ER MEMBRANE BY ITS N-TERMINAL HYDROPHOBIC REGION.
-!- SIMILARITY: THE FMN-BINDING DOMAIN IS RELATED TO BACTERIAL FLAVODOXINS. THE FAD DOMAIN APPEARS HOMOLOGGOUS WITH FERREDOXIN NADP+ REDUCTASE, NADH CYTOCHROME B5 REDUCTASE, AND GLUTATHIONE REDUCTASE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Haniu M., Iyanagi T., Miller P., Lee T.D., Shively J.E.;
Complete amino acid sequence of NADPH-cytochrome P-450 reductase
from porcine hepatic microsomes.";

-i- FUNCTION: THIS ENZYME IS REQUIRED FOR ELECTRON TRANSFER FROM NATO CYTOCHROME A450 IN MICROSOMES. IT CAN ALSO PROVIDE ELECTRON TRANSFER TO HEMP OXYGENASE AND CYTOCHROME B5.
-i- CATALYTIC ACTIVITY: NADPH + 2 ferricytochrome - NADP(+) + 2
                                    9/9
